Wood Rail Walk-In Coolers & Freezers

Inside Safety Release

The inside safety release prevents accidental entrapment inside the cooler or freezer even if the handle is locked or padlocked from the outside. A simple push on the inside plunger will release the handle and allow a quick escape.

Door Closer

A hydraulic door closer is standard on all doors 42" width or less.

Door Latch

All doors 42" width or less are designed to be self-closing using a brushed chrome positive seal latch with keyed cylinder lock and strike plate with inside safety release. Consult CCI for larger self closing doors.

Pressure Relief Vent

The Carroll Coolers pressure relief vent is designed to equalize the pressure between the inside and outside of the walk-in freezer. The relief vent has a low wattage heater that is pre-wired at the factory and is designed to prevent frost build-up and condensation. Carroll Coolers carries 3 sizes of vents to accommodate any freezer.

Cam Lift Hinge

Carroll Coolers standard hinges are cam lift, with a spring assist closing mechanism on all doors 42" in width or less. The hinge is die cast zinc with a brushed chrome finish and self-lubricating nylon cam.

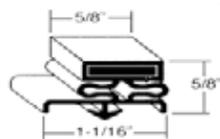

Digital Thermometer / Light Switch

The digital thermometer / light switch is located on the latch side of the door section. The pilot light alerts personnel when the inside light is on. The digital thermometer / light switch is covered with a stainless steel cover plate and are field installed.

Door Gaskets

The door gasket is a vinyl material with a concealed magnet that adheres to the metal on the door frame. The gasket design allows for quick and easy replacement in the event the gasket should ever become damaged.

Vapor Proof Lights

Carroll Coolers doors come standard with one (1) vapor-proof light fixture shipped loose. The fixture has a shatter-proof globe. Light bulbs are provided by the end user. When a cooler or freezer has more than one (1) door and a three (3) way light switch is needed, we will furnish the 3-way light switches at your request. Also available are wire guards that protect the shatter-proof globe. Optional LED lights available in several designs and sizes.

LED & Fluorescent Lights

Fluorescent lights are available in four foot lengths and provide a pleasant diffused light that emits fewer shadows than a standard vapor-proof incandescent light. LED light fixtures provide excellent illumination, energy efficiency, and are designed for ease of installation.

Door Specifications

Wood Rail Walk-In Coolers & Freezers

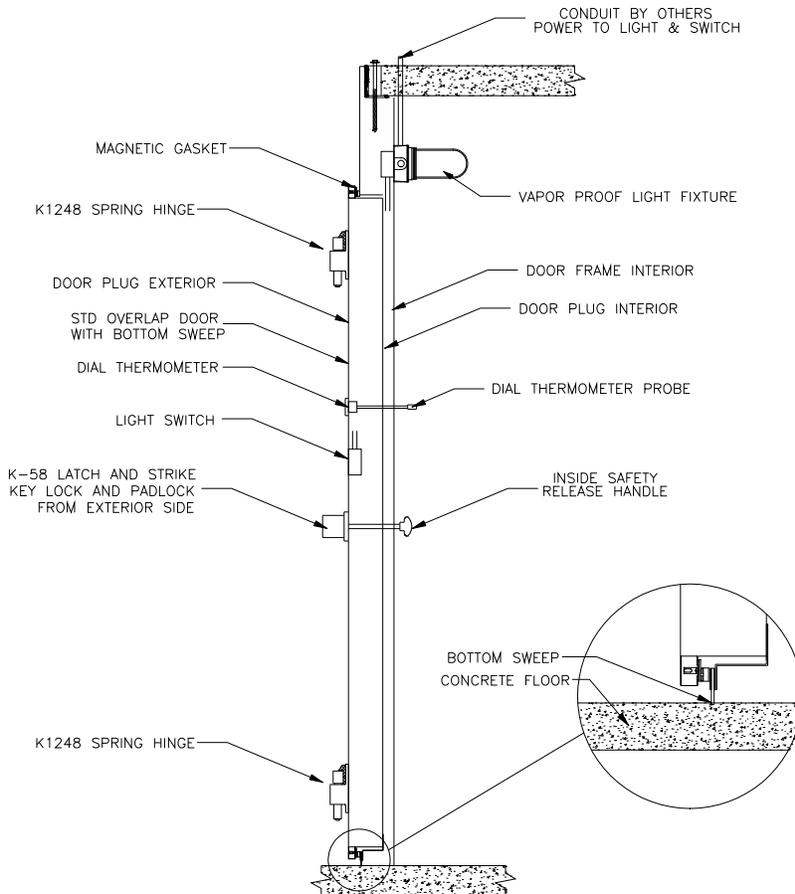

Standard Door Sizes

Carroll Coolers walk-in coolers and freezers come standard with a 34"x78" door. The door can be hinged left or right. A variety of common sizes are listed below. Other sizes are available upon request.

Overlap Doors

 36" x 84"
 48" x 78"
 48" x 84"
 54" x 78"
 54" x 84"
 60" x 78"
 60" x 84"

Typical Cross Section of Door

Thresholds

Carroll Coolers standard threshold is made of 1/8" aluminum. All freezers have a threshold, even if the freezer does not have a Carroll Coolers furnished floor. When the cooler has a floor, a 1/8" aluminum threshold is furnished. When the cooler does not have a floor, a threshold is not needed and is not furnished unless requested.

Since 1987 the people at CCI have been committed to providing you with a top quality walk-in and the very best service in the industry - both before and after the sale.

At Carroll Coolers, we take great pride in serving our customers' needs in an accurate and timely fashion. Plus, we have the industry's best on-time shipping history for quality and satisfaction guaranteed.
